

24/7 MANAGED SECURITY SERVICES

IDS/IPS 24/7 - Intrusion Detection and Prevention

Protecting your enterprise from cyber-threats requires 24/7 vigilance using advanced security mechanisms and methods. Effective security monitoring is a very demanding task, regardless size of your organization, and requires advanced technology, skilled security specialists and scalable processes. Secode's Managed Security Services protects your business from intrusions, frauds, down-time, loss of money and provides you with continuous control, expertise and damage prevention.

The challenges that the IDS/IPS 24/7 service address:

- Continuous monitoring of security events as intrusion and Denial-of-Service attacks.
- Quick and relevant countermeasures in the case of security events.
- Maintained cost-effective alarm functions and scalable processes.

The best method of distinguishing network attacks from legitimate traffic is to use an intrusion detection system (IDS). Given that methods of exploiting these weaknesses and opportunities to stop them are becoming increasingly complicated, personnel who are knowledgeable and experienced in the area are indispensable. Effective prevention requires continuous updates of the environment being monitored as well as the mechanisms being used for the monitoring. Handling and facing the constantly changing risk scenario in order to protect your operations at a reasonable cost is a considerable challenge.

The service provides:

- IDS/IPS sensors installed and configured in the customer's environment and continuous updates of IDS/IPS sensors.
- Managed IDS/IPS equipment and immediate identification and countermeasures.
- Investigation specialists available 24/7.
- Free internal resources.
- Support for standard requirements as SOX, PCI, etc.
- Efficient financing and lower TCO.
- Well-defined content for the services specified in the SLA (Service Level Agreement).

Reporting

The service includes a monthly report, presented to the customer by a security specialist and Incident Reports at the time of an attack. The reports contain analyzed events and incidents from network traffic within and directed to the customer's network, along with relevant statistics and trend analyses.

Result

The IDS/IPS provides proactive and reactive service preventing your business in real-time from security incidents 24 hours of the day, 365 days of the year.

Secode is the leading Digital Security Company in the Northern Europe. The vision is that the Internet and IT shall be secure for business, transactions and information exchange. The Company offers surveillance and protection services (24/7 Managed Security Services) from two Security Operations Centres in Gothenburg and Arendal. In combination with Secode Security Consulting, companies and organizations gain increased insight, competence and thereby control over their operations from a complete IT security perspective.
